Status: University Student

Specialization: Statistics and Data Science

Level: graduated student

Year: 2026

Executive Summary: Key Strategic Recommendations

Here are some key strategic recommendations to reduce hotel booking cancellations:

- **Platform Data Quality Control:** Enforce strict validation rules on the booking platform to prevent logic errors—such as bookings with zero adults, isolated child/baby entries, zero total nights, or erroneous "loyal customer" statuses—ensuring cleaner data for analytics.
- **User Experience & Communication:** Reduce duplicate bookings by issuing immediate PDF confirmation documents upon completion and sharing explanatory guides or video tutorials across official channels to streamline the reservation flow.
- **Targeted Retention Programs:** Launch structured loyalty programs (e.g., tier-based membership cards, exclusive discounts, free nights) to incentivize completed stays and directly lower overall cancellation rates.
- **Segment Deep Dives:** Investigate non-canceling segments—specifically **Room Type I** and **guests booking parking spaces**—to identify key behavioral triggers and apply those insights to broader guest retention.
- **Progressive Deposit Policies:** Introduce a scaled deposit model based on lead time (e.g., 20% deposit for bookings made 90 days out vs. 10% for 30 days) to minimize early-booking cancellation risks.
- **Value-Added Packaging:** Develop bundled offers combining room stays with additional amenities (dining, transport, activities) for targeted events like honeymoons or holidays, reducing price sensitivity.
- **Tighter OTA Collaboration:** Renegotiate terms with Online Travel Agencies to incorporate stricter cancellation policies, higher non-refundable rates, and upfront partial or full payments.
